

GLOBO MULTIMEDIA

Information how to properly prepare logo files used for GUI customization of XC1 XC2 XC3 receivers.

- If you wish to personalize software including logo files, please prepare logo files first, before filling-in the form. You will be asked to upload files during filling-in the form.
- Very often when you send us logo with your color of background, it doesn't look good. For best appearance, paste your logo on ready set of graphical files in colors of receiver menu.
- Do not change ANY parameters of files with logo, such as file name, resolution, format or color depth!

ATTACHED FILES DESCRIPTION:

As example for this document - below logo has been used (on examples it will be located in black frame – it's just for picture size present):

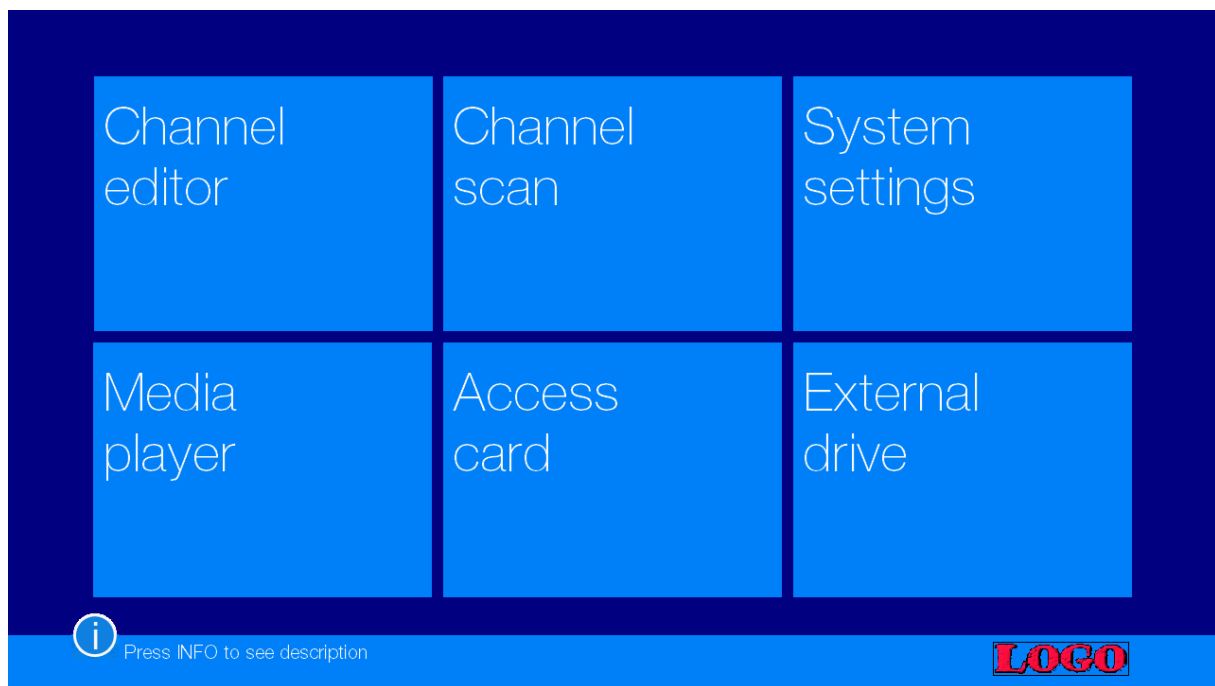

LOGO

Depending on Your requirement – every logo may be located on any background, but for best look – attached example files has been already painted with default required background color. If You want to get effect of transparency – You should locate Your logo onto this templates.
